COMP 1589 - Week 3 labs

This work is part of your assessment and when finished should be saved in a folder called **“Week3_lab”,** this will then be zipped and uploaded to the coursework upload slot.

This week there are two videos on Moodle to work through. The basic files you need are zipped and on Moodle too, in a file called **Week3_lab - starter files**.

This is the material I demoed in the lecture, but you need to work through making sure you really understand what is going on with the CSS.

Ideally you should use headphones in the labs, you can borrow some from the King William first-floor support desk if you do not have any wired headphones of your own.

Take your time, there is no rush.

Week3_task1 – this folder has the files to work through the ‘float’ demo.

You have the full html page, the image and a CSS page. I have left placeholders in the CSS for various elements. You will need to watch the video and add the CSS when it is shown to you.

```
float.html ×    # layout.css 4
week3_task1 > float.html > html
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <title>Float exercise</title>
    <link rel="stylesheet" type="text/css" href="layout.css">
</head>
<body>
<div id="container" class="clearfix">

<img src="UoG_logo.jpg" alt="UoG logo">
<h1>Basic CSS Layout</h1>
<p>Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmo
dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non pr
</p>
</div>
</body>
</html>
```

```
week3_task1 > # layout.css > ...
body{
    background-color: #ccc;

    margin: 0px;
}
#container {
    background-color: #fff;
    width: 800px;
    margin: auto;
}
.clearfix{

}
img{

}
h1{

 }
p{

}
```

You should end up with something like this for task 1

Comments short cut VS Code
First, place your cursor at the beginning of the line you wish to comment out or select multiple line at one, then, use the VS Code comment shortcut that corresponds to your platform below.

- On Windows, the shortcut is: CTRL + /
- On Mac, the shortcut is: Command + /

Week3_task2 – this folder has the files to work through the ‘flexbox’ demo.

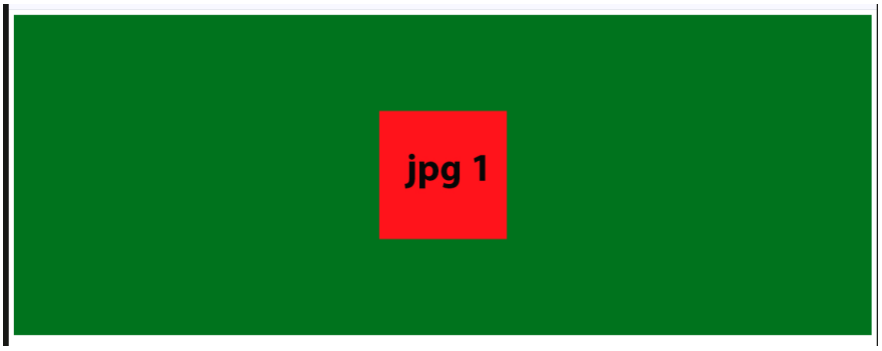
Here is the main html page. It has all the images already in place plus the beginning of the CSS in the head of the doc starting at lines 7 - 15. As before slowly go through the video stopping and starting trying out all the CSS rules that are show. This is to get used to some of the many flexbox options that are available.

flexbox.html ×

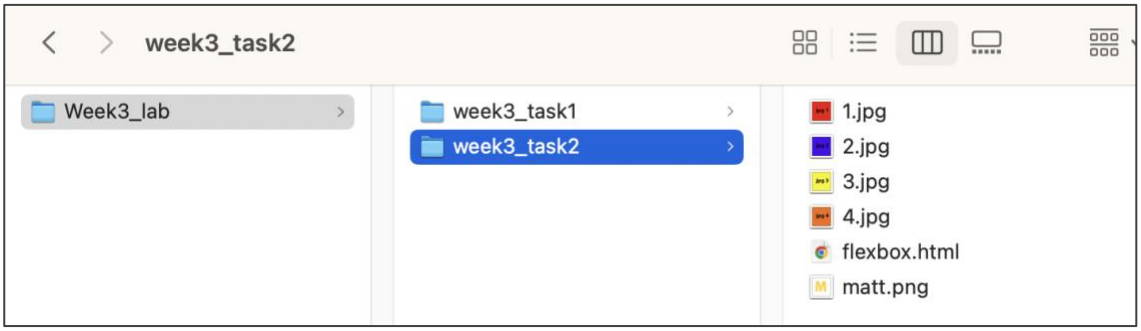
week3_task2 > flexbox.html > ...

```
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4      <meta charset="UTF-8">
5      <title>Flexbox tutorial</title>
6      <link rel="icon" href="matt.png"> <!-- favicon code -->
7      <style type="text/css">
8  div{
9      /* width: 80%;*/
10     display: flex;
11
12     background-color: green;
13     /* height: 500px; */
14 }
15     </style>
16 </head>
17 <body>
18     <div>
19         <img src="1.jpg" height="200px" width="200px">
20         <img src="2.jpg" height="200px" width="200px">
21         <img src="3.jpg" height="200px" width="200px">
22         <img src="4.jpg" height="200px" width="200px">
23     </div>
24 </body>
25 </html>
```

When you reach the end of the video you should have something like this, a single fully centered box. Upload the work in this state.



When complete you will have a folder called week3_lab containing 2 folders, one for each task as shown below. Zip this whole folder up and upload it to the coursework system.



Further study in own time

Once you have worked through this material try these links as well to get a fuller understanding.

Flexbox is one of the more modern CSS approaches to positioning objects on a page and takes a while to get used to.
