COMP-1589 Computer Systems and Internet Technologies

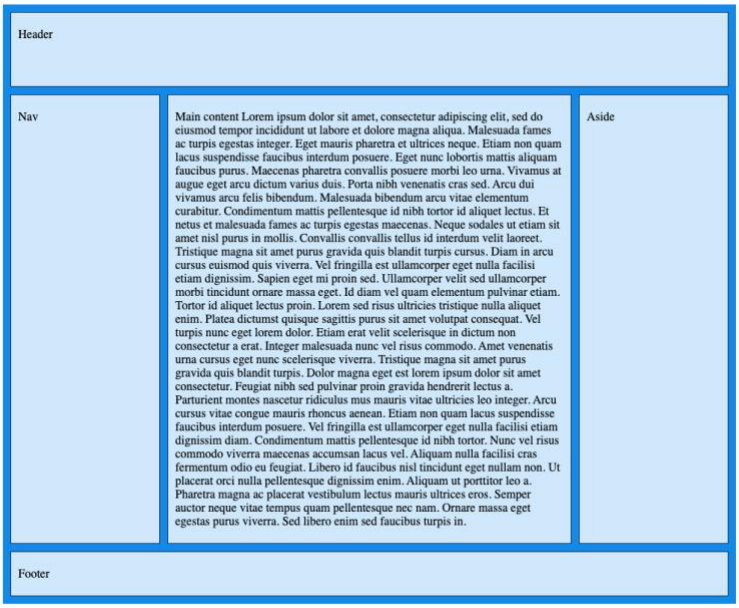
Week 5 labs

Part 1

This work is part of your assessment and when finished should be saved in a folder called "Week5_lab", this will then be zipped and uploaded to the coursework upload slot.

This week there is one video on Moodle to work through. To be able to begin this week's work you need to have completed the week4 lab task.

Duplicate the week the week4 lab folder and rename it Week5_lab.
Last week you should have ended up with something like this. This is your stating point for this week's work.



You need to work through the video making sure you really understand what is going on with the CSS as we style the page further and add extra pages to the site. Feel free to use your own colours and headings etc... it is the basic structure and navigation we are interested in here.

Ideally you should use headphones in the labs, you can borrow some from the first-floor support desk if you do not have any wired headphones of your own.

Take your time, there is no rush.

Part 2

https://www.w3schools.com/html/html_forms.asp

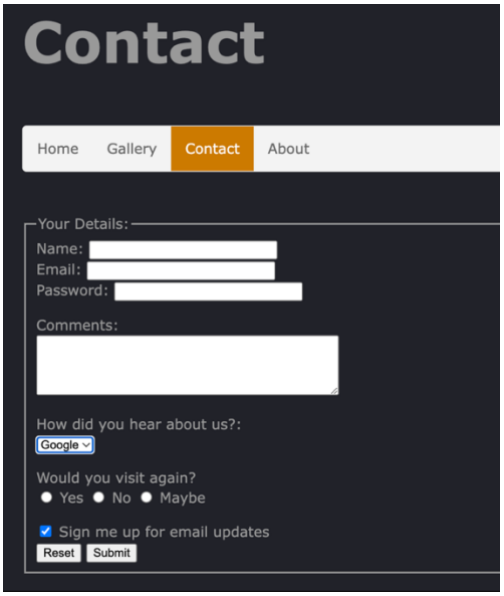
You need to add a dummy form to the contact us page?

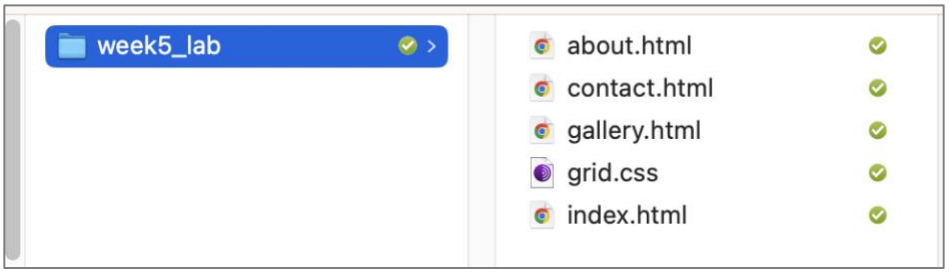
It should have the following:
2 text boxes for name and email address.
A password box.

A text area to leave a message, you can set the size of the text area in the HTML.
A drop-down menu with a few items in it.
3 radio buttons.
A checkbox.
A reset and a submit button.

You will need to look online to find out how to create these elements. This is an exercise, not a real form, in year 2 you will be using forms a lot more.

It may look *something* like this, it may be very different if you have changed the colours etc.
Make sure it has all the elements listed above, you can add more if you like.
My version could do with styling, but it's a start. See if you can make it look better than mine.
Lining up the boxes etc. Styling forms can be quite tricky, follow a tutorial!





When you have worked through the video you should have a site with 4 pages and a style sheet as below.
Zip and upload the finished folder.
